Abbreviations: Prev = prevalence, the proportion of the population who reported having current asthma; SE=standard error; CI = confidence interval; NH = non-Hispanic; AI/AN = American Indian or Alaska Native.

* Includes persons who answered “yes” to the questions: “Have you ever been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

[†] The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

[§] Statistically significant p-values for chi-square tests at 0.05.

[¶] As a subset of Hispanic.

** FPL is Federal Poverty Level, determined by family income and size using U.S. Census Bureau’s poverty thresholds. Poverty level is defined as the ratio of family income to federal poverty threshold in terms of FPL.

^{††} MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

Data Source: NCHS, National Health Interview Survey, 2016–2018

Abbreviations: Prev = prevalence, the proportion of the population who reported having current asthma; SE = standard error; CI = confidence interval; NH = non-Hispanic; AI/AN = American Indian or Alaska Native.

* Includes persons who answered “yes” to the questions: “Have you ever been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. “Non-MSA” consists of persons not living in a metropolitan statistical area.

[§] The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

[¶] Statistically significant p-values for chi-square tests at 0.05.

** Relative standard error is 30%–50%; estimate is unreliable.

^{††} As a subset of Hispanic

^{¶¶} Suppressed because relative standard error is ≥50%.

^{§§} FPL is Federal Poverty Level, determined by family income and size using U.S. Census Bureau’s poverty thresholds. Poverty level is defined as the ratio of family income to federal poverty threshold in terms of FPL.

Data Source: NCHS, National Health Interview Survey, 2016–2018

Abbreviations: Prev = prevalence, the proportion of the population who reported having current asthma; SE = standard error; CI = confidence interval.

* Includes persons who answered “yes” to the questions: “Have you ever been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. “Non-MSA” consists of persons not living in a metropolitan statistical area.

[§] The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

[¶] p-value for chi-square test is statistically significant at 0.05.

** Relative standard error is 30%–50%; estimate is unreliable.

Data Source: NCHS, National Health Interview Survey, 2016–2018

Abbreviations: Prev = prevalence, the proportion of the population who reported having current asthma; SE = standard error; CI = confidence interval; “—” state does not have the corresponding MSA category.

* Includes persons who answered “yes” to the questions: “Have you ever been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. “Non-MSA” consists of persons not living in a metropolitan statistical area.

[§] Statistically significant p-values for chi-square tests at 0.05.

[¶] Relative standard error is 30%–50%; estimate is unreliable.

** Suppressed because relative standard error is ≥50%.

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having one or more asthma attacks in the past 12 months; SE = standard error; CI = confidence interval; NH = non-Hispanic; AI/AN = American Indian or Alaska Native; FPL = Federal Poverty Level; MSA = metropolitan statistical area.

* Having had one or more episode of asthma or an asthma attack in the past 12 months

[†] Includes persons who answered “yes” to the questions: “Have you EVER been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

[§] The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

[¶] p-value for chi square test is statistically significant at 0.05.

** As a subset of Hispanic

^{††} FPL is Federal Poverty Level, determined by family income and size using U.S. Census Bureau's poverty thresholds. Poverty level is defined as the ratio of family income to federal poverty threshold in terms of FPL.

^{§§} MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having one or more asthma attacks in the past 12 months; SE = standard error; CI = confidence interval; NH = non-Hispanic; AI/AN = American Indian or Alaska Native.

* Having had one or more episode of asthma or an asthma attack in the past 12 months

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

[§] Includes persons who answered "yes" to the questions: "Have you EVER been told by a doctor or other health professional that you had asthma?" and "Do you still have asthma?"

[¶] The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

**p-value for chi-square test is statistically significant at 0.05.

^{††} Relative standard error is 30%–50%; estimate is unreliable

^{§§} As a subset of Hispanic

^{¶¶} FPL is Federal Poverty Level, determined by family income and size using U.S. Census Bureau's poverty thresholds. Poverty level is defined as the ratio of family income to federal poverty threshold in terms of FPL.

*** Suppressed because of small cell size

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having one or more asthma attacks in the past 12 months; SE = standard error; CI = confidence interval.

* Having had one or more episode of asthma or an asthma attack in the past 12 months.

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

[§] Includes persons who answered "yes" to the questions: "Have you ever been told by a doctor or other health professional that you had asthma?" and "Do you still have asthma?"

[¶] The national health interview (NHIS) survey sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

** p-value for chi-square test is statistically significant at 0.05.

^{††} Suppressed because of small cell size.

^{§§} Relative standard error is 30%–50%; estimate is unreliable.

Data Source: NCHS, National Health Interview Survey, 2016–2018

SUPPLEMENTARY TABLE 11. Asthma attack* prevalence in the past 12 months by urban-rural classification (sex=levels)[†] among all ages, children (aged 0–17 years), and adults (aged ≥18 years) with current asthma[§]: United States, 2016–2018

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having emergency department/urgent care center visits because of asthma in the past 12 months; SE = standard error; CI = confidence interval; NH = non-Hispanic; AI/AN = American Indian or Alaska Native.

* Having had one or more emergency room or urgent care center because of asthma in the past 12 months among people with current asthma

† Includes persons who answered “yes” to the questions: “Have you EVER been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

§ The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

¶ Statistically significant p-values for chi-square tests at 0.05.

** Suppressed because relative standard error is ≥50%.

†† Relative standard error is 30%–50%; estimate is unreliable.

^{§§} As a subset of Hispanic.

^{¶¶} FPL is Federal Poverty Level, determined by family income and size using U.S. Census Bureau's poverty thresholds. Poverty level is defined as the ratio of family income to federal poverty threshold in terms of FPL.

^{***} MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having emergency department/urgent care center visits because of asthma in the past 12 months; SE = standard error; CI = confidence interval; NH = non-Hispanic; AI/AN= American Indian or Alaska Native.

* Having had one or more emergency room or urgent care center visit because of asthma in the past 12 months, among people with current asthma.

† Includes persons who answered “yes” to the questions: “Have you ever been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

§ The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

¶ Statistically significant p-values for chi-square tests at 0.05.

** Relative standard error is 30%–50%; estimate is unreliable

†† Suppressed because relative standard error is ≥50%.

§§ As a subset of Hispanic.

¶¶ FPL is Federal Poverty Level, determined by family income and size using U.S. Census Bureau’s poverty thresholds. Poverty level is defined as the ratio of family income to federal poverty threshold in terms of FPL.

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having emergency department/urgent care center visits because of asthma in the past 12 months; SE = standard error.

*Having had one or more emergency room or urgent care center because of asthma in the past 12 months among people with current asthma.

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

[§]Includes persons who answered “yes” to the questions: “Have you EVER been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

[¶]Relative standard error is 30%–50%; estimate is unreliable.

Abbreviations: Prev = prevalence, the proportion of the population with current asthma who reported having emergency department/urgent care center visits because of asthma in the past 12 months; SE = standard error; CI = confidence interval.

* Having had one or more emergency room or urgent care center because of asthma in the past 12 months among people with current asthma.

[†] MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

[§] Includes persons who answered "yes" to the questions: "Have you ever been told by a doctor or other health professional that you had asthma?" and "Do you still have asthma?"

[¶] The National Health Interview Survey (NHIS) sample weights were used to adjust for non-response, post-stratification, and probability of selection to provide estimates for the intended U.S. populations.

** Statistically significant p-values for chi-square tests at 0.05.

^{††} Relative standard error is 30%–50%; estimate is unreliable.

^{¶¶} Suppressed because relative standard error is ≥50%.

Data Source: NCHS, National Health Interview Survey, 2016–2018

SUPPLEMENTARY TABLE 17. Prevalence of emergency department/urgent care center visits* because of asthma in the past 12 months by urban-rural classification (six-levels)[†] among all ages, children (aged 0–17 years), and adults (aged ≥18 years) with current asthma[§]: United States, 2016–2018

Abbreviation: APC = Annual Percent Change.

Notes:

Current asthma: includes persons who answered “yes” to the questions: “Have you ever been told by a doctor or other health professional that you had asthma?” and “Do you still have asthma?”

Asthma attack: includes having had one or more episode of asthma or an asthma attack in the past 12 months.

Emergency department/urgent care center visits: includes having had one or more emergency room or urgent care center because of asthma in the past 12 months among people with current asthma.

Asthma mortality rate per million: underlying cause of death is asthma; includes *International Classification of Diseases, Tenth Revision* (ICD-10) codes: J45–J46.

* MSA is metropolitan statistical area. Large MSAs have a population of 1 million or more; small MSAs have a population of less than 1 million. "Non-MSA" consists of persons not living in a metropolitan statistical area.

[†] p-value is statistically significant at 0.05.
